PROFESSIONAL SUMMARY

Entry-level Software Engineer and final-year B.Tech Computer Science student with hands-on internship experience in Agentic AI and MERN Stack development. Built and deployed full-stack web apps, AI automation pipelines, and ML-powered systems using Python, JavaScript, and the MERN stack. Passionate about creating scalable, user-focused software solutions. Seeking roles in Full Stack Development, Backend Engineering, AI/Automation, or Software Engineering.

TECHNICAL SKILLS

Languages: Python, JavaScript, PHP, HTML5, CSS3

Frontend / Backend: React.js, React Native, Node.js, Express.js, Flask, FastAPI

AI / ML: Prompt Engineering, Scikit-learn, Pandas, NumPy, Groq AI, Claude AI

Databases & Tools: MongoDB, MySQL, Git, GitHub, Playwright, Postman, Vercel, Render

INTERNSHIP EXPERIENCE

Agentic AI Intern | Innomatics Research Labs

Feb 2026 – May 2026 | Remote

- Designed and deployed multi-step agentic pipelines using LangChain, LangGraph, and RAG — enabling LLMs to autonomously retrieve, reason, and act on real-world data.
- Built and tested FastAPI-based AI backends with Prompt Engineering techniques, improving response accuracy and reducing hallucinations in agent outputs.

MERN Stack Intern | EY GDS & AICTE | Edunet Foundation

Dec 2024 – Jan 2025 | Remote

- Developed and delivered a full-stack MERN application from scratch — covering React.js UI, Node.js/Express.js REST APIs, and MongoDB database design.
- Followed industry-standard practices for JWT authentication, component-based architecture, and API error handling under EY Global Delivery Services mentorship.

EDUCATION

B.Tech – Computer Science Engineering

2023 – 2026 (Pursuing)

Vaagdevi College of Engineering, Warangal

Diploma – Electronics & Communication Engineering

2019 – 2023

Mother Teresa Institute of Science & Technology

PROJECTS

Team Task Manager – MERN Stack [Repo](#)

2026

- Built and deployed a production-ready team management platform with JWT auth, role-based access (Admin/Member), real-time task tracking, and an analytics dashboard — live on Vercel + Render.

Stack: React.js, Node.js, Express.js, MongoDB, JWT, Vercel, Render

CAMX GTM Automation – AI Pipeline [Repo](#)

2026

- Engineered an end-to-end GTM pipeline that scrapes 100+ CAMX exhibitor profiles using Playwright, auto-enriches company data, and generates personalised AI outreach via Groq AI — eliminating manual effort entirely.

Stack: Python, Playwright, Groq AI, Google Sheets API

RadiantSkincare – AI Skin Detection App [Repo](#)

2025

- Trained a deep learning model to classify skin conditions from photos and served it via a Flask REST API — integrated with a React.js frontend delivering personalised product recommendations.

Stack: Python, Flask, Scikit-learn, React.js, Node.js, Express.js, MongoDB

Women Safety Application – React Native [Repo](#)

2025 – 2026

- Developed a cross-platform SOS mobile app with one-tap real-time GPS alerts to emergency contacts, a Node.js/Express.js backend, and an admin dashboard for live monitoring.

Stack: React Native, Expo, Node.js, Express.js, MongoDB
